

**EXP NO:4**

**DATE:**

### **RSA**

**Aim :** To implement an encryption algorithm using Rsa.

#### **Algorithm:**

- Step 1: Select two large prime numbers, p and q. ● Step 2: Calculate the modulus,  $n = p * q$ .
- Step 3: Compute Euler's totient function,  $\phi(n) = (p - 1) * (q - 1)$ .
- Step 4: Choose a public exponent, e, such that  $1 < e < \phi(n)$  and  $\gcd(e, \phi(n)) = 1$ .
- Step 5: Compute the private exponent, d, such that  $(d * e) \bmod \phi(n) = 1$ .
- Step 6: Convert the plaintext message into a numerical representation, usually using ASCII values or Unicode.
- Step 7: Encrypt the message by computing ciphertext, c, using the formula  $c = (\text{msg}^e) \bmod n$ .
- Step 8: Print the encrypted data.
- Step 9: Decrypt the ciphertext by computing the original message, m, using the formula  $m = (c^d) \bmod n$ .
- Step 10: Print the original message.
- Step 11: Return 0 for successful execution and program termination.

#### **Program:**

```
import java.io.*;
import java.math.*;
import java.util.*;
public class GFG {
    public static double gcd(double a, double h)
    {
        double temp;
```

```

        while (true)
        {temp = a % h;
if (temp == 0)
return h;
a = h;

h = temp;
        }
    }
    public static void main(String[] args)
    {
        double p = 9;
        double q = 5;
        double n = p * q;
        double e = 2;
        double phi = (p - 1) * (q - 1);
        while (e < phi) {
            if (gcd(e, phi) == 1)
                break;
            else
                e++;
        }
        int k = 2;
        double d = (1 + (k * phi)) / e;

        double msg = 12;

        System.out.println("Message data = " + msg);

        double c = Math.pow(msg, e);
        c = c % n;
        System.out.println("Encrypted data = " + c);
        double m = Math.pow(c, d);
    }
}

```

```
        m = m % n;  
        System.out.println("Original Message Sent = " + m);  
    }  
}
```

### Output:

```
java -cp /tmp/RgOMJoXiEh/GFG  
Message data = 12.0  
Encrypted data = 18.0  
Original Message Sent = 29.0  
  
=== Code Execution Successful ===
```

### Result:
